

## Connecting to network drives from Mac

For this to work you either have to be on eduroam with your username and password from UNIS or a wired connection inside the Research Park, Guesthouse or student housing. This will also work if you are on other networks and you use the Cisco AnyConnect VPN-client.

Open Finder and press Cmd ⌘ + K

In Server Address you type in what share you want to access.

When you get asked for username and password, use your UNIS username and password.

### Employees only:

[cifs://srv07.unis.no/ansatt\\_felles\\$](cifs://srv07.unis.no/ansatt_felles$)

[cifs://srv07.unis.no/ansatt\\_home\\$/"your-user-name"](cifs://srv07.unis.no/ansatt_home$/)

### All:

[cifs://srv05.unis.no/stud\\_data\\$](cifs://srv05.unis.no/stud_data$)

### Students only:

[cifs://srv05.unis.no/stud\\_home\\$/"your-user-name"](cifs://srv05.unis.no/stud_home$/)

If you choose to map your network drive, note that the drives will not automatically reconnect the when you restart. This is because it connects to eduroam after you logged on.
