

## Guidelines on writing learning outcomes

### Purpose

Provide course leaders at UNIS a better understanding of how to write good learning outcome descriptors.

### What are learning outcomes?

Learning outcomes descriptors describes what students are expected to know and to be able to do by the end of a course and are regulated through the [Norwegian Qualification Framework for Lifelong Learning \(NQR\)](#) and [Studietilsynsforskriften](#). NQR separates learning outcomes into “Knowledge”, “Skills” and “General competences”:

| Learning outcome categories | Definition  |
|-----------------------------|---|
| <b>Knowledge</b>            | Knowledge is <u>understanding</u> of theories, facts, concepts, principles and procedures <u>in a discipline, subject area and/or profession</u> .  |
| <b>Skills</b>               | Skills is the ability to <u>apply knowledge to complete tasks and solve problems</u> . There are different types of skills: cognitive, practical, creative and communicative.   |
| <b>General competence</b>   | General competence is the ability to <u>use knowledge and skills</u> in an <u>independent manner</u> in <u>different situations</u> in study and work contexts, by demonstrating the ability to cooperate, the ability to act responsible, and a capacity for reflection and critical thinking. |

Learning outcomes should be based on what **you** want the students to learn during a course. Therefore, the applied learning activities and the chosen form of assessment should be well connected to the defined learning outcomes. In other words, it is important that there is a consistency between what you want the students to learn from the course (learning outcomes), how you want them to learn (learning activities) and how you want to measure the achievements (assessments).

The descriptors should therefore be evaluated after each course period to see if and how they are:

- suitable for the outcome of the course
- met when it comes to learning activities
- met when it comes to assessment<sup>1</sup>

---

<sup>1</sup> This is especially important for skills and general competences connected to field work at UNIS. An internal mapping of 14 bachelor courses at UNIS in 2018 revealed that 25% of skills and general competences were not assessed.

Further, to better work with your course content you can break down your learning outcomes into smaller learning objectives by using a course goal matrix<sup>2</sup>. This can help you to think of what you want the students to be able to know and to do in the end of the course and what kind of teaching methods and assessment strategies that enable your students to achieve the learning outcomes.

### **Communicating learning outcomes**

As well as being a part of the course description the learning outcomes descriptors should be repeatedly communicated to the students, i.e. when the course starts up, along the course period and when ending the teaching part of the course. Communicating the learning outcomes to guest lectures is also important when planning the course teaching. This will help students as well as teachers to keep a focus on what is crucial in the course.

### **Learning outcomes – an agreement between you – the students and the institution**

Learning outcome descriptors are part of the agreement between the institution, the teachers and the students. It will serve as an explanation of expectations for all partners as well as information to employees and society in general about what to expect from the candidate after passing the subject.

Learning outcome descriptors will also be used:

- in cases where the candidate wishes explanation of grades
- as the basis for a new exam commission in the case of complaints against a grade
- as information to other institutions on e.g. approval of external education

## **8 steps for improving your learning outcomes descriptors**

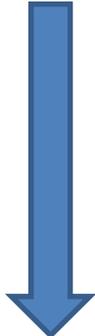

---

1. You should work with the action verbs that describe what the students should be able to do after the course. It is better to write verbs in present than in future.  
For example: “Upon completing the course, the students can: *(and then chose the verb, in present, which describes the task the student should do and what can be observed)* e.g. “Describe the diversity, function, and ecology of Arctic .....”
2. Use a single, clear action verb for each learning outcome. This allows course leaders to determine whether or not an objective has been met without having to distinguish between partial completion or success.
3. Choose a verb that allows you to measure their learning process level. If you want to measure their understanding ([learning level 2 in Blooms Taxonomy](#)) they should be able to describe a phenomenon, explain a process, identify key elements, etc.

---

<sup>2</sup> An example of course goal matrix is given in Chris Borstad’s presentation during Learning Forum 2016 - see resources page 4.

4. Show a progression in learning through your learning outcomes by using action verbs drawn from the various stages of Blooms Taxonomy. Following table is based on: <https://cft.vanderbilt.edu/guides-sub-pages/blooms-taxonomy/>

| Learning process   | Category   | Description of level              | Action Verbs  |
|--|------------|-----------------------------------|---|
| <br>Complex<br><br><br><br><br><br>Less complex | Create     | Produce new or original work      | design, assemble, construct, conjecture, develop, formulate, author, investigate                                |
|  | Evaluate   | Justify a stand or decision       | appraise, argue, defend, judge, select, support, value, critique, weigh   |
|  | Analyze    | Draw connections among ideas      | differentiate, organize, attribute, relate, compare, contrast, distinguish, examine, experiment, question, test |
|  | Apply      | Use information in new situations | execute, implement, solve, use, demonstrate, interpret, operate, schedule, sketch,                              |
|  | Understand | Explain ideas or concepts         | classify, describe, discuss, explain, identify, locate, recognize, report, select, translate                    |
|  | Remember   | Recall facts and basic concepts   | define, duplicate, list, memorize, repeat, state  |

If you are unsure whether the level of learning outcomes descriptors is too high or too low compared to what is expected at the bachelor, master or PhD programme level, you can look into the summarized table on pages 5-6 where each level is described<sup>3</sup>.

5. At UNIS master and PhD courses are run together. The learning outcomes should be different in the course descriptions (see examples on page 6) and visualized in how you are running your course as well, showing that you expect a more complex level of learning among the PhD students than for master students. This should also be reflected in different assessment forms and / or the grading criteria between master- and PhD courses.
6. Write your learning outcomes in short sentences to maintain clarity.
7. Do not use more than 3-5 learning outcomes within each competence description.
8. The learning outcomes descriptors should be observable and measurable and there should be a clear alignment between learning outcomes, learning activities and assessment. A learning outcome should not be included if it is not possible to assess it.

**The NQF programme level descriptors for bachelor, master and PhD degree**

|                  | Bachelor's qualifications  | Master's qualifications   | PhD qualifications  |
|------------------|--|---|---|
|                  | <i>The candidate...</i>  | <i>The candidate...</i>   | <i>The candidate...</i>   |
| <b>Knowledge</b> | has broad knowledge of important topics, theories, issues, processes, tools and methods within the field   | has advanced knowledge within the academic field and specialized insight in a limited area  | is in the forefront of knowledge within his/her academic field and masters the field's philosophy of science and/or artistic issues and methods |
|                  | is familiar with research and development work in the field  | has thorough knowledge of the scholarly or artistic theories and methods in the field   | can evaluate the expediency and application of different methods and processes in research and scholarly and/or artistic development projects   |
|                  | can update his/her knowledge in the field  | can apply knowledge to new areas within the academic field  | can contribute to the development of new knowledge, new theories, methods, interpretations and forms of documentation in the field              |
|                  | has knowledge of the history, traditions, distinctive character and place in society of the field  | can analyze academic problems on the basis of the history, traditions, distinctive character and place in society of the field                      |   |
|                  |  |   |   |
| <b>Skills</b>    | can apply academic knowledge and relevant results of research and development work to practical and theoretical problems and make well-founded choices | can analyze existing theories, methods and interpretations in the field and work independently on practical and theoretical problems                | can formulate problems, plan and carry out research and scholarly and/or artistic development work  |
|                  | can reflect upon his/her own academic practice and adjust it under supervision   | can use relevant methods for research and scholarly and /or artistic development work in an independent manner                                      | can carry out research and scholarly and/or artistic research work of a high international standard   |
|                  | can find, evaluate and refer to information and scholarly subject matter and present it in a manner that sheds light on the problem                    | can analyze and deal critically with various sources of information and use them to structure and formulate scholarly arguments                     | can handle complex academic issues and challenge established knowledge and practice in the field  |
|                  | masters relevant scholarly tools, techniques and forms of communication  | can carry out an independent, limited research or development project under supervision and in accordance with applicable norms for research ethics |   |

|                           |   |  |   |
|---------------------------|---|--|---|
| <b>General competence</b> | has insight into relevant academic and professional ethical issues  | can analyze relevant academic, professional and research ethical problems  | can identify new relevant ethical issues and carry out his/her research with scholarly integrity      |
|                           | can plan and carry out varied assignments and projects over time, alone or as part of a group, and in accordance with ethical requirements and principles                         | can apply his/her knowledge and skills in new areas in order to carry out advanced assignments and projects                | can manage complex interdisciplinary assignments and projects   |
|                           | can communicate important academic subject matters such as theories, problems and solutions, both in writing and orally, as well as through other relevant forms of communication | can communicate extensive independent work and masters language and terminology of the academic field                      | can communicate research and development work through recognized Norwegian and international channels |
|                           | can exchange opinions and experiences with others with a background in the field, thereby contributing to the development of good practice  | can communicate about academic issues, analyses and conclusions in the field, both with specialists and the general public | can participate in debates in the field in international forums                                       |
|                           | is familiar with new thinking and innovation processes  | can contribute to new thinking and innovation processes  | can assess the need for, initiate and practice innovation   |

| <b>Examples on learning outcome descriptors for master and PhD students</b> |   |  |
|---|---|--|
|   | Master course   | PhD course   |
|   | <i>Upon completing the course, the students can</i>   | <i>Upon completing the course students can</i>   |
| <b>Knowledge</b>  | <ul style="list-style-type: none"> <li>describe different..... theories based upon published material and first-hand experience from field situations</li> </ul>  | <ul style="list-style-type: none"> <li>argue for different..... theories based upon published material and first-hand experience from field situations</li> </ul>  |
| <b>Skills</b>   | <ul style="list-style-type: none"> <li>operate both basic and advanced ..... equipment in field</li> <li>demonstrate teamwork in research projects</li> <li>develop a limited research project on.....</li> </ul> | <ul style="list-style-type: none"> <li>Investigate new ways to monitor ..... using existing equipment in field</li> <li>demonstrate leadership in research projects</li> <li>design a research grant proposal that meets the standard for international research applications</li> </ul> |
| <b>General competence</b>   | <ul style="list-style-type: none"> <li>recognize /examine different ethical issues connected to sampling of.....</li> </ul>   | <ul style="list-style-type: none"> <li>argue for different ethical issues connected to sampling of.....</li> </ul>   |
